UNIDAD IZTAPALAPA
DEPARTAMENTO DE QUÍMICA**

DQ.0355.2025

Octubre 22, 2025

Dr. Román Linares Romero
Presidente del Consejo Divisional
de la División de Ciencias Básicas e Ingeniería
PRESENTE

A través de este medio le solicito incluir en el orden del día de la próxima sesión del Consejo Divisional el informe sabático del Profesor Robin Preenja Sagar, del Área Académica de Química Cuántica. Dicho informe sabático comprende el período de 22 meses a partir del 6 de noviembre de 2023.

Agradezco su atención a esta solicitud y le envío un cordial saludo.

Atentamente
Casa abierta al tiempo

Dr. Juan Marcos Esparza Schulz
Jefe del Departamento de Química

UNIDAD IZTAPALAPA

División de Ciencias Básicas e Ingeniería
Departamento de Química

Ave. Ferrocarril San Rafael Atlixco 186. Col. Leyes de Reforma 1A Sección. Iztapalapa C.P. 09310. CdMx, México.
Apartado Postal 55-534.

UNIVERSIDAD AUTÓNOMA METROPOLITANA

CONSEJO DIVISIONAL DE CIENCIAS BÁSICAS E INGENIERIA

INFORME DE PERÍODO SABÁTICO

DATOS GENERALES

Nombre del profesor: Robin Preenja Sagar N° empleado: [REDACTED]
Departamento: Química Área: Química Cuántica
Teléfono particular: [REDACTED] Extensión UAM-I: [REDACTED] mail: [REDACTED]@izt.uam.mx

DATOS DEL PERÍODO SABÁTICO SOLICITADO

N° meses solicitados: 22 Fecha de inicio: 06-11-2023 Fecha de terminación: 05-09-2025
Institución donde se realizará: _____
Depto., Laboratorio, etc.: Área de Química Cuántica-UAMI
Domicilio de la institución: Av. Ferrocarril San Rafael Atlixco 186, Iztapalapa, CdMx
Teléfono: [REDACTED] Fax: ***** E-mail: [REDACTED]@xanum.uam.mx

OBJETIVOS DEL PERÍODO SABÁTICO

Continuar con mi investigación.

Preparar material didáctico para una optativa en el posgrado.

Terminar con el Proyecto Terminal de un estudiante.

Terminar con la tesis de maestría de otra estudiante.

METAS ALCANZADAS EN EL PERÍODO SABÁTICO

- | | | |
|--|---|---|
| ☐ Memorias in extenso en libro de resúmenes* | ☒ Artículos de investigación en revista indexada* | ☒ Presentaciones en congresos |
| ☐ Libros o capítulos de libros | ☐ Grado | ☐ % Avance de estudios de posgrado |
| ☒ Otros (especifique): <u>Organización de un simposio internacional.</u> | | |

* Indicar en anexo si se trata de trabajo publicado, aceptado o sometido

TIPO DE ACTIVIDADES ACADÉMICAS DESARROLLADAS

(Indique aquellas relacionadas con las actividades desarrolladas)

- | | | |
|---|--|--|
| ☒ Investigación | ☒ Docencia | ☒ Difusión |
| ☐ Formación académica | ☐ Formación profesional | ☐ Entrenamiento técnico |
| ☐ Otros (especifique): _____ | | |

RESUMEN DEL PLAN DE ACTIVIDADES ACADÉMICAS DESARROLLADAS

(El llenado de esta sección no sustituye el informe detallado de actividades)

8 artículos- 5 publicados, 3 están abajo revisión.

Organización y participación en un simposio internacional. Organización y participación en una escuela local.

Preparación de material didáctico para una materia optativa en el posgrado.

Terminación del Proyecto Terminal de un estudiante

Terminación de la maestría de una estudiante.

Pláticas de difusión impartidas en distintos foros.

PARA USO DEL JEFE DE DEPARTAMENTO

Después de haber evaluado el informe detallado de actividades del periodo sabático del interesado según los lineamientos establecidos para tal efecto; informo al Consejo Divisional que:

- ☒ Los objetivos SE cumplieron satisfactoriamente
☐ Los objetivos SE cumplieron parcialmente
☐ Los objetivos NO se cumplieron
☐ NO se cumplió el propósito del sabático

Firma del Jefe de Departamento

22/10/2025

Fecha

PARA USO DEL CONSEJO DIVISIONAL

El Consejo Divisional, en su Sesión No. _____ del _____ sobre el Periodo sabático del interesado acordó que:

- ☐ Los objetivos SE cumplieron satisfactoriamente
☐ Los objetivos SE cumplieron parcialmente
☐ Los objetivos NO se cumplieron
☐ NO se cumplió el propósito del sabático

Secretario del Consejo Divisional

*Además de este formato-resumen, el interesado deberá entregar su Informe detallado de actividades junto con la documentación probatoria correspondiente.

REPORTE-SABATICO-Robin-Preenja-Sagar-24328

Departamento de Química-Área de Química Cuántica

2024

- Las actividades académicas realizadas en 2024 fueron reportadas y evaluadas por la Comisión Dictaminadora de Ciencias Básicas e Ingeniería con dictamen **CDA01.001.25**.
- Se puede consultar el documento con el anexo en
https://drive.google.com/file/d/1iUGDouqA7htc_LBp9FrKsZuvuqWotzNo/view?usp=drive_link
- Los documentos probatorios se encuentren en
<https://drive.google.com/drive/folders/1M0gu6Dwlw-Cmqp3ijxbRbwc2F14av8Wp?usp=sharing>

Resumen: 26 actividades reportadas, 3 artículos publicados, un alumno de Servicio Social terminado. Se finalizó y se entregó el Proyecto Terminal del alumno Adan Barbosa Jimenez, cumpliendo con un objetivo en el plan de actividades.

2025

- Co-organizador del simposio internacional **Commemorating the 50th anniversary of Universidad Autónoma Metropolitana: Applications of Information Theory in Natural Sciences**, llevado a cabo en la UAMI, 28-31 de enero, 2025.
<http://quimica.izt.uam.mx/applications-of-information-theory-in-natural-sciences/>
- Una edición especial celebrando el evento fue publicada en el Suplemento de la Revista Mexicana de Física <https://rmf.smf.mx/ojs/index.php/rmf-s>
- 2 artículos de mi autoría/co-autoría fueron publicados en la edición especial. Impartí una plática y participé en la mesa redonda al final del evento.
- Participé en la organización de la **Escuela en ciencias de la información y tecnologías cuánticas**, llevada a cabo el 22-24 de septiembre, 2025 en la Casa de la Primera Imprenta. La escuela fue dirigida hacia estudiantes de la licenciatura y el posgrado. Impartí una sesión de la escuela y participé en la sesión abierta de preguntas.
- Junto con Dr. Esquivel y Dr. Laguna del Área de Química Cuántica, se armó la materia optativa **Ciencias de la Información** para el Posgrado Divisional, **Tecnologías**

Cuánticas y Teoría de la Información. Con esto se cumplió uno de los objetivos del plan de actividades.

- Participé en el proceso de la selección de un candidato para ocupar la plaza de Profesor Visitante en el Departamento de Química con el tema de inteligencia artificial (no cuento con documento probatorio).
- La tesis de maestría de la alumna Karen Leticia Trejo González está entregada a la Comisión de Posgrado en Química para su revisión. Esto cumple con uno de los objetivos del plan de actividades.
- Se ha iniciado una colaboración con la Mtra. Angelina Mendoza Tavera y el Dr. Adrián Escobar Ruiz del Departamento de Física en la UAMI.
- Se ha iniciado una colaboración con Dr. Manuel Solano y Dr. Julio Hernández Pérez de la BUAP (desde 2024).
- 3 manuscritos están sometidos y han pasado por una primera revisión. Los documentos tienen por nombre, manuscrito-1, manuscrito-2 y manuscrito-3 en la liga compartida abajo.
- 23 actividades académicas para reportar en **2025** (hasta septiembre). Los documentos probatorios se encuentren en <https://drive.google.com/drive/folders/1JoIJ9dMhLt2oLW0ljpFCdrlQiohKK0E2?usp=sharing>

FECHA 2025/03/03 No. CDA01.001.25

DE LA COMISION DICTAMINADORA DE: CIENCIAS BASICAS

AL SECRETARIO ACADEMICO DE LA DIVISION DE: CIENCIAS BASICAS E INGENIERIA, UNIDAD IZTAPALAPA

RESPECTO A LA SOLICITUD NO. I.CBI.006.25 DE FECHA 2025/01/10 Y CON BASE EN EL EXAMEN INTEGRAL DE LAS ACTIVIDADES DE DOCENCIA, INVESTIGACION, CREACION ARTISTICA, PRESERVACION Y DIFUSION DE LA CULTURA, ACTIVIDADES PROFESIONALES DE COORDINACION O DIRECCION ACADEMICA Y PARTICIPACION UNIVERSITARIA Y LAS DEMAS EXPRESADAS EN EL ART. 7 DEL TABULADOR DE INGRESO, PROMOCION Y PERMANENCIA DEL PERSONAL ACADEMICO, ESTA COMISION EMITE EL SIGUIENTE:

D I C T A M E N

NOMBRE DEL SOLICITANTE	NO. DE EMPLEADO

UAM - Iztapalapa

P r e s e n t e

Estimado Dr. Sagar:

Por este conducto me permito agradecerle su participación como jurado en el examen predoctoral de **Angelina Nohemí Mendoza Tavera** (CVU # 905186) alumna del Posgrado en Física, el día 30 de mayo de 2024.

El cuidado con el que usted revisó la propuesta presentada por la alumna y su presencia como jurado durante el examen, fueron fundamentales para asegurar que el trabajo de la alumna cumple con los requisitos para continuar con sus estudios de posgrado.

Uno de los objetivos de mayor importancia de la División de Ciencias Básicas e Ingeniería es evaluar rigurosamente el trabajo de los alumnos de posgrado. Su participación fue esencial para cumplir con este objetivo.

Sin otro particular, aprovecho la ocasión para enviarle un cordial y respetuoso saludo.

Abstract. The effects of quantum interferences and interaction strength on the entropic uncertainty relations, and on mutual information correlation sums, are examined in two-level superposition states of two coupled oscillators. The presence of quantum interferences results in a movement of the entropy sums toward the uncertainty relation bound, for both attractive and repulsive interaction potentials. On the other hand, these interferences suppress the statistical correlations in the presence of an attractive potential, while the correlations increase for a repulsive one. In general, stronger interactions between particles move the entropy sums away from bound, with the result that the systems possess larger statistical correlations. However, there are superposition and attractive interaction regimes, where the entropy sum of an interacting system can actually lie closer to the bound, in comparison to the corresponding non-interacting one. In these cases, the statistical correlations between particles is lesser for the interacting systems, as compared to the non-interacting ones. These effects are not observed when repulsive potentials are present. Here, the non-interacting systems lower-bound both the entropy sums and correlation measures. These results offer insights into the nature of superposition or quantum interference effects in interacting quantum systems, and the behavior in terms of the entropic uncertainty relations, statistical correlations and interaction strength.

Keywords: Entropic uncertainty relations; mutual information; information theory; momentum space; coupled oscillators.

Resumen. Se examinan los efectos que las interferencias cuánticas y la magnitud de la interacción tienen sobre las relaciones de incertidumbre entrópicas, así como sobre las sumas correlaciones medidas a través de la información mutua, en estados de superposición de dos niveles de dos osciladores acoplados. La presencia de interferencias cuánticas da como resultado un movimiento de las sumas entrópicas hacia la cota de la relación de incertidumbre, tanto para potenciales de interacción atractivos como repulsivos. Por otra parte, en presencia de un potencial atractivo, estas interferencias suprimen las correlaciones estadísticas, mientras que las correlaciones aumentan en presencia de uno repulsivo. En general, con interacciones más fuertes entre partículas, las sumas de entrópicas se alejan de la cota, dando como resultado mayores correlaciones estadísticas en los sistemas. Sin embargo, existen regímenes de superposición e interacción atractiva, en los cuales la suma entrópica de un sistema interactuante puede estar más cerca de la cota, en comparación con el sistema no interactuante correspondiente. En estos casos, las correlaciones estadísticas entre partículas son menores para los sistemas interactuantes que para los no interactuantes. Estos efectos no se observan en los potenciales repulsivos. En este caso, los sistemas no interactuantes establecen límites inferiores tanto para las sumas entrópicas como para las medidas de correlación. Estos resultados dan información sobre la naturaleza de los efectos de superposición o interferencia cuántica en

Mutual information sums and relations with interaction energies in N -particle quantum systems

Saúl J. C. Salazar[✉], Humberto G. Laguna[✉], and Robin P. Sagar[✉]

Departamento de Química, Universidad Autónoma Metropolitana, Avenida Ferrocarril San Rafael Atlixco No. 186, Leyes de Reforma 1a Sección, Iztapalapa, 09310 Ciudad de México, México

 (Received 4 April 2024; accepted 28 August 2024; published 26 September 2024)

The sums of position- and momentum-space mutual information measures are used to examine the pairwise and higher-order statistical correlation in the ground states of N -particle coupled oscillators. Analytical expressions for these measures are shown to be related to the logarithmic interaction energies of these states, plus those of mirror states where the intensities of the one- and two-body potentials are interchanged, and the nature of the attractive or repulsive interaction is opposite to that in the original state. The measures separate the contributions from the interactions and those from the effective interactions due to marginalization into different terms. The pairwise mutual information sum is linearly related to the Shannon entropy sum in two particle systems, while the total correlation sum exhibits a similar relationship in three particle ones. In the latter instance, the interaction information sum can be related to entropy differences. This illustrates how entropy sums are connected to correlation measure sums in these systems. All measures approach zero with large N , when the magnitudes of the one- and two-body potentials are fixed. The pair mutual information and total correlation sums decay monotonically with N in the presence of an attractive potential and monotonically increase with a repulsive potential. On the other hand, the interaction information sum exhibits a minimum at small N , with an attractive potential. This is a consequence of the higher-order correlations governing behavior at smaller N while the pairwise ones dominate at larger N . Results are presented when the magnitude of the one-body potential is set to N .

DOI: 10.1103/PhysRevE.110.034133

I. INTRODUCTION

The study and quantification of correlation effects are important aspects of the many-body problem. Their quantification provides a means of evaluating approximate solutions when analytical solutions are unavailable. In general, these effects are normally due to the interaction, or correlation, between or among the particles of a given system. Thus information can be gained by studying the energetic differences between interacting and noninteracting systems via interaction energies. On the other hand, there has been interest in statistical correlation measures as applied to quantum systems [1–20] to quantify these correlations. This is applicable since the Born interpretation of the N -particle wave function in quantum mechanics is provided in terms of N -particle probability distributions. The question to be asked here is what are the relationships, if any, between correlation measures obtained from the energetic perspective and those from the statistical perspective. Are they related, or are they different in nature? Phrasing the question differently, the energy is one component of the Schrödinger equation. Examining the statistical correlation through the densities, places the interpretation of correlation effects on the wave function, the other component of the equation.

The starting point for discussions about statistical correlations is usually the pairwise ones that occur between pairs of particles. However, one can also consider higher-order statistical correlations that occur among three or more particles. Are there differences between pairwise and higher-order correlations, and how do they manifest themselves in

quantum systems? In a wider context, the application of statistical correlation measures to physical systems, and their interpretations in terms of other properties, is also of general interest.

II. MATHEMATICAL PRELIMINARIES

A. Pair mutual information measure

Pair mutual information [21,22] is a measure which quantifies statistical correlation by taking differences between the Shannon entropies of one (ρ) and two-variable (Γ) densities. It is defined as

$$\begin{aligned} \int \Gamma(x_1, x_2) \ln \left[\frac{\Gamma(x_1, x_2)}{\rho(x_1)\rho(x_2)} \right] dx_1 dx_2 \\ = (S_{x_1}^1 + S_{x_2}^1) - S_{x_1, x_2}^2 = 2S_x^1 - S_{x_1, x_2}^2, \end{aligned} \quad (1)$$

with the Shannon entropies of one- and two-variable densities given as

$$\begin{aligned} S_{x_i}^1 &= - \int \rho(x_i) \ln \rho(x_i) dx_i, \\ S_{x_i, x_j}^2 &= - \int \Gamma(x_i, x_j) \ln \Gamma(x_i, x_j) dx_i dx_j. \end{aligned} \quad (2)$$

The superscripts on the entropies (S^D) provide the information about the dimensionality of the underlying density while the subscripts indicate the particular variables that are involved. The marginal one-variable densities are obtained by

Tuning Pair and Higher-Order Mutual Information Measures in Oscillator Systems with N -Dependent Frequencies

Saúl J.C. Salazar,* Humberto G. Laguna, and Robin P. Sagar

Analytical expressions for pair and higher-order mutual information measures in position and momentum space are examined for many-particle (N) coupled oscillator systems in their ground states. These relations reveal that the magnitudes of the statistical correlations monotonically increase with the strength of the particle interaction for all particle numbers (N). On the other hand, the magnitudes of the measures monotonically decrease as N increases, when the intensities of the one- and two-body potentials are fixed. However, extremal points appear in the measures as N is varied, when the intensity of the one-body potential is N -dependent, and set at $N^{-\alpha}$. Fractional values of α lead to the appearance of extremal points. These results illustrate how the intensity of the one-body potential can be used to tune the behavior of the statistical correlation measures in these systems.

1. Introduction

There is current interest in mutual information measures in various fields, where the determination of statistical correlations or dependencies among variables is of interest. In physical settings, such measures offer insights into the nature of interactions that are present and the possible role that they might play in associated phenomena. Mutual information measures have gained popularity since they are capable of detecting non-linear dependencies, while linear ones such as the correlation coefficient are incapable of.

The starting point is consideration of the pairwise mutual information,^[1,2] to study dependencies between pairs of variables.^[3–12] The pair mutual information is defined as a relative entropy between a two-variable pair distribution, $\Gamma(x_1, x_2)$,

and a product of the corresponding marginal distributions, $\rho(x_1)\rho(x_2)$,

$$\int \Gamma(x_1, x_2) \ln \left[\frac{\Gamma(x_1, x_2)}{\rho(x_1)\rho(x_2)} \right] dx_1 dx_2 = (S_{x_1}^1 + S_{x_2}^1) - S_{x_1 x_2}^2 = 2S_x^1 - S_{x_1 x_2}^2 \quad (1)$$

$S_{x_1 x_2}^2$ is the Shannon pair entropy of the two-variable distribution,

$$S_{x_1 x_2}^2 = - \int \Gamma(x_1, x_2) \ln \Gamma(x_1, x_2) dx_1 dx_2 \quad (2)$$

The notation employed uses superscripts on the entropies (S^k) to provide the information about the dimensionality of the underlying density, while the subscripts identify the particular variables that are involved. The marginal distributions are obtained by integration of the two-variable one

$$\rho(x_1) = \int \Gamma(x_1, x_2) dx_2 \quad \rho(x_2) = \int \Gamma(x_1, x_2) dx_1 \quad (3)$$

with the Shannon entropies of these marginals ($j = 1$ or $j = 2$) given as

$$S_{x_j}^1 = - \int \rho(x_j) \ln \rho(x_j) dx_j \quad (4)$$

In dealing with quantum systems, particle indistinguishability establishes that $\rho(x_1) = \rho(x_2)$. Thus, $S_{x_1} = S_{x_2}$, which yields the last equality of Equation (1). Note that the initial two-variable distribution can also be obtained from reduction of a many-variable one. For quantum systems with many-particle (N) wave functions, this reduction over the remaining ($N - 2$) variables is given in terms of the squared modulus of the wave function

$$\Gamma(x_1, x_2) = \int |\Psi(x_1, x_2, \dots, x_N)|^2 dx_3 \dots dx_N \quad (5)$$

In fact, $N(N - 1)/2$ pair distributions, $\Gamma(x_i, x_j)$, can be obtained by integration over the remaining ($N - 2$) variables. However, particle indistinguishability also establishes that $\Gamma(x_i, x_j) = \Gamma(x_j, x_i)$. This leads to $S_{x_i x_j}^2 = S_{x_j x_i}^2$.

There is also keen interest in measures which go beyond pairwise detection, to consider the correlations among three or more variables. In this respect, the total correlation,^[13,14] and interaction information^[15–21] measures, have been introduced and studied in different contexts. Total correlation is the relative entropy

CONSTANCIA DE ACREDITACIÓN DE SERVICIO SOCIAL
29/11/2024

CSS/DCBI/L-283/2024

LIC. MARTHA X. GONZALEZ GUERRERO
COORDINACIÓN DE SISTEMAS ESCOLARES
Presente

Con fundamento en las normas establecidas por el Reglamento de Servicio Social a Nivel Licenciatura de la Universidad Autónoma Metropolitana esta División Académica hace constar que el alumno:

ADAN BARBOSA JIMENEZ, Matrícula 2173047984

de la Licenciatura en QUÍMICA, acreditó su Servicio Social en: **CALCULO DE CONCENTRACIONES COMO FUNCIÓN DEL TIEMPO EN REACCIONES QUÍMICAS UTILIZANDO MÉTODOS NUMÉRICOS**, en la Dependencia **UNIVERSIDAD AUTÓNOMA METROPOLITANA (UAM)**, **ÁREA DE QUÍMICA FÍSICOQUÍMICA-CUÁNTICA**, bajo la asesoría del **DR. ROBIN PREENJA SAGAR**, que corresponde al sector **EDUCATIVO** con orientación a la actividad **OTRO**.

La prestación del Servicio Social inició el **16/02/2023** y concluyó el **14/11/2024**, sin recibir estímulo económico.

Se expide la presente para los usos legales correspondientes.

Atentamente

**CONSTANCIA DE ASESORAMIENTO
DE SERVICIO SOCIAL**

Por medio de la presente se hace constar que el profesor **ROBIN PREENJA SAGAR**, del **DEPARTAMENTO DE QUIMICA**, de la División de **CBI** asesoró el siguiente Servicio Social:

ALUMNO : BARBOSA JIMENEZ ADAN
MATRÍCULA : 2173047984
LICENCIATURA: QUIMICA
PERIODO : del 16 de FEBRERO del 2023 al 14 de NOVIEMBRE del 2024
TÍTULO : CALCULO DE CONCENTRACIONES COMO FUNCIÓN DEL TIEMPO EN REACCIONES QUÍMICAS
UTILIZANDO MÉTODOS NUMÉRICOS
LIBERACIÓN : 29/11/2024

Se extiende la presente para los fines que del interesado convengan, en la Ciudad de México, el veintinueve de noviembre del 2024.

ATENTAMENTE

Asunto: Terminación de servicio social

Ing. Luis Fernando Castro Careaga
Secretaria Académica de la División de Ciencias Básicas e Ingeniería
Universidad Autónoma Metropolitana, Iztapalapa

El que suscribe **Dr. Robin Preenja Sagar**, catedrático de esta Universidad y asesor en el Servicio Social.

Informo por este medio la terminación del Servicio Social, del alumno **Adan Barbosa Jiménez** con matrícula 2173047984, en la Licenciatura de Química, realizando el proyecto "**Cálculo de concentraciones como función del tiempo en reacciones químicas utilizando Métodos Numéricos**", el cual fue elaborado en el periodo del 16 de febrero de 2023 al 14 de noviembre de 2024.

Se extiende la presente con el fin de cumplir con uno de los requisitos solicitados por la Universidad.

Me despido y quedo a sus ordenes para cualquier duda o aclaración,

Atentamente.

Robin Preenja Sagar

Dear Professor Sagar,

Thank you for submitting your review of the following manuscript:

Manuscript ID: biology-2931432

Title: Innate and Adaptive Regulation of Cognition

Authors: Rodrick Wallace *

We are continuously working to improve the services we offer and would greatly appreciate receiving feedback about your experiences through the short survey below.

Click here to start the survey: https://www.research.net/r/Reviewer_feedback

We encourage you to register an account on our submission system and bind your ORCID account (<https://susy.mdpi.com/user/edit>). You are able to deposit the review activity to your ORCID account manually via the below link:

<https://susy.mdpi.com/user/reviewer/status/finished>

We also invite you to contribute to Encyclopedia (<https://encyclopedia.pub>), a scholarly platform providing accurate information about the latest research results. You can adapt parts of your paper to provide valuable reference information for others in the field.

Kind regards,

Mr. Vlad Stan

Dear Dr Sagar,

Re: "Maximum Entropy via Fenchel duality"

Manuscript reference: PHYSSCR-126704

Thank for you reviewing this Paper for Physica Scripta.

We are committed to improving our reviewer experience and would like to ask for your feedback on the process of reviewing a submission with us.

Please take a few minutes to complete a short survey by following the link below:

<https://forms.office.com/r/T26Bu71Wz5>

We also want to remind you that by completing a reviewer report for us, you will have earned a discount on our [Article Publication Charges \(APCs\)](#). You can also gain recognition of your review via the Web of Science Reviewer Recognition Service and ORCID.

Thank you for your help and we look forward to working with you again in the future.

Yours sincerely,

On behalf of:

Physica Scripta

Dear Professor Sagar,

Thank you for submitting your review of the following manuscript:

Manuscript ID: technologies-2883867

Title: Dynamics of converging scientific and technological development in artificial intelligence and quantum technologies

Authors: Mario Coccia *

Our Editorial Office and Academic Editors will contact you if they have any questions about your review report. We ask that you remain available, as far as possible, during the peer-review process in case of follow-up questions. We are continuously working to improve the services we offer and would greatly appreciate receiving feedback about your experiences through the short survey below.

Click here to start the survey: https://www.research.net/r/Reviewer_feedback

We encourage you to register an account on our submission system and bind your ORCID account (<https://susy.mdpi.com/user/edit>). You are able to deposit the review activity to your ORCID account manually via the below link:

<https://susy.mdpi.com/user/reviewer/status/finished>

We also invite you to contribute to Encyclopedia (<https://encyclopedia.pub>), a scholarly platform providing accurate information about the latest research results. You can adapt parts of your paper to provide valuable reference information for others in the field.

Kind regards,

Ms. Marijana Apic

Dear Dr Sagar,

Thank you very much for reviewing this paper, "Fisher and Shannon Information Entropic Energy Interaction in One and Three Dimensional Spaces For Homonuclear and Heteronuclear Diatomic Molecules" for Molecular Physics. We do appreciate the time and effort that refereeing involves, and recognise that our referees' input is crucial to the effectiveness of the Journal.

I hope not only that we may continue to apply to you for your assistance with the review process for Molecular Physics, but also that you will be submitting research papers of your own.

We would be interested to hear your experience of reviewing for us today, please click the following link to complete a short survey: <https://survey.alchemer.eu/s3/99329429/Taylor-Francis-peer-review-survey?ac=TMPI>

Yours sincerely

Wenjian Liu
